Productivity Tip #2

Don't "Study" #study goals

do I never study. I'll read my textbooks. I'll review notes. I'll finish assignments and "study" practice questions. But I never "study". A big waste of your time is to spend time "studying" without specifically defining what you want to accomplish. At the end of the year, grades, not how many hours you "studied" are going to matter most.

Cal Newport, author of *How to Win at College*, claims he hates the word studying:

"It's ambiguous, and for most students it's entangled in all sorts of emotional baggage. They feel guilty if they haven't suffered enough in the library. Student life, for them, becomes a constant struggle — always trying to "study" more, yet always falling a bit short. It's a lot like dieting. But with less involvement from Kintie Alley."¹

1. Cal Newport, "Studying with Kintie Alley: Dealing with Quarter Exams and Coping with Early Classes", <https://calnewport.com/blog/ty-2016>

190

Instead of studying, define the activities you need to perform in order to learn the material. For myself these are the activities I need to do in order to get an A or A+ in most classes:

- 1) Read the chapters covered
- 2) Complete assignments and take notes in class
- 3) Use some of the holistic learning methods to tackle trouble spots.
- 4) Optionally take a set of flow-based notes for the material covered before tests.

That's it. My list has been narrowed down by doing as much learning in-class as possible, so your list might have more items. The point isn't that I have a short list, but that I have made a list in the first place. Unless you memorize what you need to do in order to learn, you'll waste endless hours "studying" instead of optimizing your time to actually learn.
